ACROSS THE WIDE OCEAN:

THE WHY, HOW, AND WHERE OF NAVIGATION
FOR HUMANS AND ANIMALS AT SEA

the glory of the ocean

Where are they going? How do they get there? This brand-new, fully-illustrated book traces the tracks of a sea turtle hatchling, a sailboat full of scientists, a whale mother and calf crossing the shipping lanes, a container ship, a blue shark, and a nuclear submarine.

marine science, geography and navigation

Across the Wide Ocean features the lives and work of scientists, mapmakers, and navigators studying the ocean, and presents cutting-edge results of their work with animals, the ocean, and navigation systems. Exciting, full of adventure, and so beautiful . . .

writing, art, and the life of the scientist

Karen tells the story of how this book came to be, combining action photographs of her dive in the submarine Alvin, video from the deep ocean, and the art of the book-making process in an exciting presentation tailored to the interests and learning level of your group.
